

Why Should I Care? Family Old-Age Caregiving and Preferences for Family or Public Care Provision in France

Supplemental Materials

Gonzalo Arévalo-Iglesias

Bremen International Graduate School of Social Sciences, University of Bremen

1 Reproducibility

All codes used to produce the results below and in the paper have been made available on the following server: <https://github.com/garevaloig/OldAgeCare>

The employed Generations and Gender Survey data can be requested at: <https://www.ggp-i.org/ggs-round-i/>

2 Research Design

Table 1: Operationalisation of Variables

Variable	Original GGS Items	Transformations	Characteristics
Old-Age Care Preferences	<i>1110_a</i>	Levels inverted Transformed ordered to numeric	Likert Scale, numeric. Values ranging from 1 “Mainly for the family” to 5 “Mainly for society”
Old-Age Family Caregiving: Cares for parent?	<i>710, 711 512, 532</i>	If respondent cares for father or mother 60 or older, Cares for parent=1	Dummy
Old-Age Family Caregiving: Cares for partner?	<i>710, 711 373y</i>	If respondent cares for spouse or partner 60 or older, Cares for partner=1	Dummy
Psychological Well-Being	<i>721_a:721_g</i>	Mean of the 7 items is taken. Alpha-Cronbach=0.9. Values inverted.	Numeric. Values ranging from 1 (lowest well-being) to 4 (highest well-being)
Age	<i>age</i>		Numeric
Health	<i>701</i>	Values inverted.	Likert Scale, ordinal. Values ranging from 1 (worst health) to 5 (best health).
Employment Status	<i>actstat</i>	Levels recoded to “in paid employment, “not in paid employment”	Dummy
Lives with Parents	<i>501</i>	Levels recoded to “no”, “yes”	Dummy
Marital Status	<i>marstat</i>	Levels recoded to “not married” and “married”.	Dummy
Has Kids	<i>ankids</i>	Number of kids recoded to “no” and “yes”	Dummy
Household Income	<i>1009</i>	Levels recoded to “<1500”, “1500-3000”, “>3000”	Categorical
Gender	<i>sex</i>		Dummy, time-invariant
Educational Level	<i>aeduc</i>	Levels recoded to “not completed higher education” (ISCED ≤ 2) and “completed higher education” (ISCED ≥ 3). Education level at Wave 1 kept invariant.	Dummy, time-invariant
Respondent Needs Help with Personal Care	<i>704</i>		Dummy.

3 Descriptive Analyses

3.1 Old-Age Care Preferences

Figure 1: Distribution of old-age care preferences

Source: Gender and Generations Survey I, n=16157

Figure 2: Distribution of old-age care preferences by gender

Source: Gender and Generations Survey I, n=16157

Figure 3: Distribution of old-age care preferences by caregiver type group

Source: Gender and Generations Survey I, n=16157

Figure 4: Average old-age preferences by gender and caregiver type group

Source: Gender and Generations Survey I, n=16157

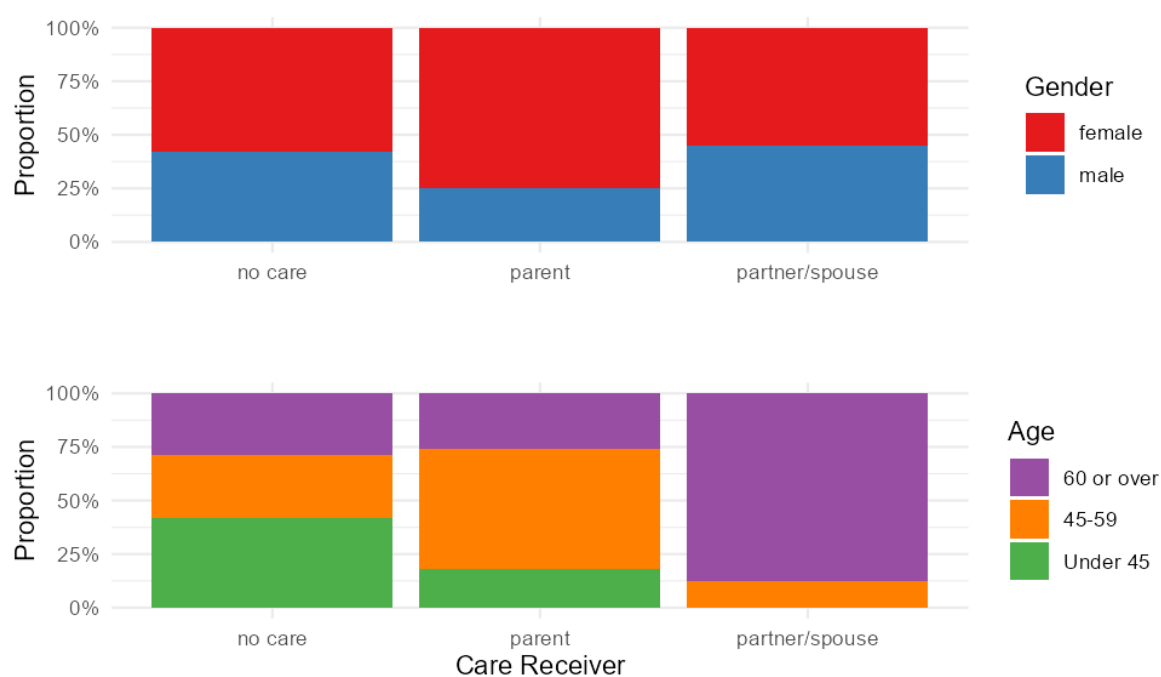

3.2 Old-Age Family Caregiving

Table 2: Distribution of caregiving across genders and age groups (pooled sample)

	Men	Women	Under 45	45-59	60 and over	N
<i>Cares (total)</i>	0.31	0.69	0.05	0.47	0.47	476
<i>Cares for parent</i>	0.26	0.74	0.07	0.63	0.30	341
<i>Cares for partner</i>	0.45	0.55	0.00	0.13	0.87	135

3-Wave pooled sample (group sizes in right column)

Figure 5: Gender and age distribution for each caregiving group
